PROJECT DESCRIPTION:-

The theme of our Project is Hotel Management System. We are planning to build an online portal for XYZ hotel. It will allow check-ins, check-outs, reservations, employee information handling, product and supplier information handling etc.. The hotel offers accommodation, meals, additional facilities and other services. Staying includes amenities like Breakfast, Lunch, dinner, tea, Laundry, Ironing, transport and room service. There will be customer record, employee record, manager record, customer history, customer booking and many things which are related to database.

There is a food lounge/restaurant in the hotel. So, we will provide a section for that also so that the customer can order food seamlessly.

Two kinds of users can handle the system.

1. Online Users, 2. Administrator or Hotel Management.

Customer needs to sign up, then he can use the website to book room and other facilities.

Admins will be provided login details from the hotel management. The application of the Hotel Management System bears the following functions to use by the Administrator.

1. Room status, Allocated Room Modification, Allocation of Room as per the Customer Interest
2. Details for the Customer Check in and Check out
3. Customer Data Management
4. Statement and Transactions of the Customer
5. Customer Report and Feedback.
